family, and their community, discusses complementary and medical therapies, and covers interactions with women during outpatient and in-patient care. Nutrition, culture, and patient teaching are carefully integrated throughout this unique text. Focuses on the care of the woman as a partner in her own health care to teach the nurse how to provide a humanistic, holistic approach to care. Age based considerations occur on a continuum so the care of the adolescent and older woman is integrated throughout. Alternative and complementary therapies are included wherever appropriate to stress the importance of understanding culturally based and therapeutic care alternatives to allopathic interventions. Nutritional considerations are integrated throughout to provide important information on how to assess, intervene, and evaluate nutritional needs across the continuum of care. Abuse, ethical, and legal issues are included where appropriate to guide the student in effective questioning when assessing the care needs of the woman.
